## 1. Introduction

The City of Richmond Hill and southern Bryan County is anticipated to grow significantly in the near future. Transportation improvements will be needed in order to accommodate and promote this growth while maintaining an acceptable level of service on the roadways for all resident in the County. This study is intended to evaluate the transportation needs in the area and provide recommendations regarding future roadway improvements.

The amount of development anticipated in the area will be estimated for the 2030 and 2040 time frames. The roadway improvements needed to provide for the expected growth will be assessed and prioritization of improvements will be made. These assessments are based on current conditions and anticipated development patterns. As the development in the area occurs, the assumptions and recommendations made as a part of this study will need to be updated periodically to ensure they align with actual development patterns.

## 2. Existing Conditions

## Roadway Conditions

The study area is shown in Figure 1. Major roadway corridors within the area include US 17, SR 144, Harris Trail, Belfast River Road, and Belfast Keller Road. The I-95/US 17 and the I-95/SR 144 interchanges are not evaluated as a part of this study because GDOT currently has projects underway at each of these locations. Each of these roadway corridors will serve as a focus area in this report; the existing facility conditions are described below.

## US 17

US 17 is a major arterial running north and south through the Richmond Hill area. It is currently a four lane section with a divided median. Major intersections are located at the I-95 interchange, Harris Trail Road, and SR 144. GDOT is currently working on a project to improve the loop ramp and lanes in the area. If when this improvement is completed a signal has not been included at the northern ramp termini with US 17 then, it is recommended a study be completed (if it was not a part of the GDOT improvement) to determine when a signal may be warranted at that location. There are currently signals at the following locations along the roadway: Truck stop access road west of I-95, Ramp Termini west of I-95, Harris Trail Road, SR 144, and Mulberry Drive.

## SR 144

SR 144 is a major arterial connecting the southern end of Bryan County to I-95 and US 17. It is a multi-lane section between the I-95 ramps and Timber Trail, where it narrows to a two lane section. Portions of SR 144 provide a flush median and center turn lane, other sections have a raised divided median. SR 144 is planned to be widened by Georgia DOT from the terminus of the existing four lane section south to Belfast River Road. There are currently signals at the following locations along the roadway: Ramp Termini west of I-95, Rushing/Exchange St (Kroger), US 17, and Timber Trail. GDOT is currently evaluating the I-95 ramp termini for operational improvements including the installation of a roundabout at each ramp termini.

## Harris Trail

Harris Trail runs roughly parallel to SR 144 and connects the southern areas of Bryan County to US 17. It is a four lane facility between US 17 and Timber Trail; it narrows to two lanes south of Timber Trail. The only intersection currently signalized on this roadway is the intersection of US 17. During the construction of SR 144 this roadway will likely see an increase in traffic. The existing conditions of the roadway should be evaluated prior to construction beginning to determine what improvements may be needed to accommodate the increase in traffic.

## Belfast River Road

Belfast River Road serves as a connection between Belfast Keller Road and SR 144 in the southern part of Bryan County. It is a two lane facility. The side streets along this route are all stop controlled. The intersection of Belfast River Road and SR 144 at the entrance to the County complex is controlled with a single lane roundabout. This intersection will be converted to its final configuration with the SR 144 widening project.

## Belfast Keller Road

Belfast Keller Road currently serves as a connection from the southern part of Bryan County to US 17. In the near future, Belfast Keller will serve as the primary access to I-95 for the southern part of Bryan County when the new interchange is constructed. It is currently a two lane facility. The side streets along the route are all stop control facilities.

## Traffic Conditions

Peak hour traffic counts were taken at key intersections in November 2015; details of the count data are included in the appendix. The morning and afternoon peak hour traffic conditions are evaluated at the following intersections:

- US 17 and SR 144
- US 17 and Harris Trail/ Shopping Center
- US 17 and Belfast Keller Road
- SR 144 and Timber Trail
- $\quad$ Harris Trail and Timber Trail
- $\quad$ SR 144 and Port Royal Road
- Harris Trail and Port Royal Road
- $\quad$ SR 144 and Fort McAllister Road
- SR 144 and Belfast River Road / Capt. M Freeman
- Belfast River and Durham Marsh Trail / Harris Trail
- SR 144 and Belfast Keller Road / Oak Level Road
- Belfast Keller Road and Belfast River Road

Historical volumes based on GDOT count station data are shown in Table 1. The data shown below indicates an increase in traffic on the two State roads and traffic along the local roads basically remaining flat. Based on the GDOT data and the peak hour counts taken, an approximate current daily volume is estimated at key locations along the area corridors. These current daily volumes are shown in Figure 2.

Table 1 - GDOT Count Station Data

| Count station \# - Street | 2010 ADT | 2011 ADT | 2012 ADT | 2013 ADT | 2014 ADT |
| :---: | :---: | :---: | :---: | :---: | :---: |
| $029-0103$ - US 17 | 22,080 | 23,460 | 23,420 | 23,267 | 23,900 |
| $029-0174$ SR 144 | 13,670 | 13,440 | 13,660 | 13,570 | 16,800 |
| 029-8020 - Harris Trail | - | 3,180 | 3,200 | 3,110 | 3,110 |
| $029-0223$ - Belfast Keller | 2,440 | 2,380 | 2,340 | 2,330 | 2,330 |

Traffic operations at intersections are typically evaluated in terms of "Level of Service" or LOS. The LOS is a measurement of delay incurred at an intersection or for a particular movement. LOS is defined by the Transportation Research Board's Highway Capacity Manual (HCM) from which LOS A represents free flow conditions with minimal delays; LOS F represents congested conditions.

Table 2 shows the HCM criteria for both signalized and unsignalized intersections.

Table 2. Level of Service Definitions

| LEVEL OF SERVICE | Control Delay per Vehicle (seconds) |  |
| :---: | :---: | :---: |
|  | Unsignalized Intersection | Signalized Intersection |
| A | $\leq 10$ | $\leq 10$ |
| B | $>10$ and $\leq 15$ | $>10$ and $\leq 20$ |
| C | $>15$ and $\leq 25$ | $>20$ and $\leq 35$ |
| D | $>25$ and $\leq 35$ | $>35$ and $\leq 55$ |
| E | $>35$ and $\leq 50$ | $>55$ and $\leq 80$ |
| F | $>50$ | $>80$ |

Capacity analyses were completed based on the recent peak hour counts; results are shown in Table 3. The following intersections currently have one or more legs during the morning or afternoon peaks that are failing (LOS E or F): US 17/Belfast Keller, Harris Trail/Timber Trail, SR 144/Port Royal, and SR 144/Fort McAllister. More detailed analysis of these intersections should be completed to determine potential improvements in the short term (prior to construction of SR 144).

Table 3. Current Levels of Service

| Intersection | Control | 2015/16 AM Peak Hour |  | 2015/16 PM Peak Hour |  |
| :---: | :---: | :---: | :---: | :---: | :---: |
|  |  | LOS | DELAY <br> (sec) | LOS | DELAY <br> (sec) |

| SB (Belfast River) |  | A | 9 | A | 9 |

## 3. Planned Improvements

Numerous roadway projects have been evaluated or proposed in previous studies, some are currently scheduled for construction.

As mentioned, a new interchange on I-95 is scheduled to be constructed at Belfast Keller Road. The project is currently in the design stages and will be built within the next 5 years. SR 144 is planned to be widened to a four lane divided facility from just south of Timber Trail to Belfast River Road. This project has been designed, right-of-way acquisition is ongoing and it is scheduled for let sometime next year. Prior to the improvements proposed as a part of these two projects there should be an assessment of the roadways that will be utilized as alternate routes by the traveling public to determine what, if any, upgrades will be needed to accommodate the increased traffic. These improvements may range from signage or marking improvements to widening of lanes to the addition of shoulders along the more heavily traveled routes. These assessments need to be completed quickly so the improvements can be made and the roadways be ready to accept the increase in traffic when construction begins.

The most recent Bryan County Transportation Plan evaluated widening US 17 from 4 to 6 lanes from the Liberty County line to the l-95 interchange. Also evaluated was the widening of Harris Trail Road from 2 to 4 lanes from Timber Trail to Belfast River Road and the widening of Belfast Keller Road from US 17 to Belfast River Road. There is no planned timetable for construction of these projects. A full list of the projects included in the current plan is attached in the appendix.

The Draft Bryan County Bicycle and Pedestrian Plan evaluated and suggested bike lanes, shoulder widening, and shared use pathways along many of the main corridors in the region. A map of the recommendations, taken from the draft report, is attached in the appendix. There is no planned timetable for these bike/pedestrian improvements. As developments are proposed all modes or transportation should be considered and included where practical.

## 4. AcCess Management

For each roadway and corridor, it will be important to implement an access management strategy that supports both development and mobility while maintaining the integrity of the transportation system. This section will outline some basic guidelines with regard to access management. The City should consider implementation of an access management plan or guidelines for local roads to help maintain acceptable levels of service and enhance safety along these routes.

Access management is the systematic control of the location, spacing, design, and operation of driveways, median openings, interchanges, and street connections to a
roadway. It also involves roadway design applications, such as median treatments and auxiliary lanes, and the appropriate spacing of traffic signals.

The purpose of access management is to provide vehicular access to land development in a manner that preserves the safety and efficiency of the transportation system. Guidance from the GDOT Driveway and Encroachment Manual and the Transportation Research Board publication Access Management Manual is described below.

## Signal spacing

Closely spaced or irregularly spaced traffic signals on arterial roadway result in frequent stops, unnecessary delay, increased fuel consumption, and high crash rates. Alternatively, long and uniform signal spacing allows timing plans that can efficiently accommodate varying traffic conditions during peak and off-peak periods.

According to the Access Management Manual, the ideal spacing of signalized intersections along a major arterial corridor is approximately $1 / 2$ mile. This separation provides a progression speed ranging from 30 to 40 mph . This spacing may not be achievable in all circumstances due to constraints such as topography, environmental issues/wetlands, etc. While this spacing should be provided if feasible, shorter separation distances of $1 / 4$ mile can also provide progression speeds in the 30 mph range.

The GDOT Driveway manual notes that a minimum signal spacing of $1 / 4$ mile is required in rural environments and 1000 feet in urban settings.

## Median and access spacing

The spacing of driveway access points and median openings is typically determined based on the functional classification of the main roadway and the speed limits.

The GDOT Driveway Manual notes that the preferred spacing for median crossovers in rural environments is $1 / 2$ mile with a minimum spacing of $1 / 4$ mile. In urban settings, the preferred spacing is 2,000 feet and the minimum spacing is 1000 feet. Minimum driveway spacing requirements vary depending on the speed limit. GDOT requirements range from 125 feet for 30 mph roadways to 350 feet for 55 mph roadways.

## Auxiliary Turn Lanes

Auxiliary turn lanes are installed on approaches to an intersection to provide for deceleration and storage of vehicles waiting to turn right or left. The GDOT Driveway Manual states that such lanes are "always beneficial" and are typically required in conjunction with commercial driveway permit applications.

## 5. Area Development

There is tremendous growth potential in the southern part of Bryan County. Local planners anticipate that much of this potential growth will be realized in the near future. This growth will affect all residents of the County. The new interchange at I-95 and Belfast Keller Road is anticipated to spur immediate development and change travel patterns in the region. In addition to numerous small developments, several large tracts of land are anticipated to be developed.

The Belfast Commerce Centre PD II comprises roughly 2,000 acres near the proposed new l-95 / Belfast Keller Road interchange. This areas is anticipated to one day include up to roughly 19 million square feet of commercial / industrial space and 1,000
residences. An additional 10,700 residences are anticipated on the Belfast Siding property east of I-95. A large residential development, Waterways, is planned east of SR 144 and would access near the intersection SR 144 and Belfast Keller Road. Waterways is anticipated to eventually include up to 3,000 residences, with supporting commercial spaces. Connectivity between developments via internal roadways should be encouraged by the governing entity to provide alternative routes for shorter trips which would normally utilize the main roadways.

For this evaluation, development potential will split into three areas:

- Area A: Between US 17 and I-95

Within the Belfast Commerce Centre development, approximately 19 million square feet of industrial / commercial space is planned within Area A.

Development in this area will primarily use US 17 and the new I-95 / Belfast Keller Road interchange. For initial volume estimates, the generated trips are assumed to be distributed with $70 \%$ on internal roadways and I-95, $15 \%$ to US 17 , and $15 \%$ to areas east of I-95 via Belfast Keller Road.

- Area B: Between SR 144 and I-95

Surrounding the interchange, a regional activity center/ commercial space is planned within Area B. The main generator to traffic on the interior roadways in Area $B$ is assumed to be new residences. Roughly 11,000 new homes are ultimately envisioned in the region between I-95 and SR 144.

Development in this area will disperse among all major area roadways, Belfast Keller Road and the new I-95 interchange, Harris Trail Road, and SR 144. Numerous internal connector roadways will likely be needed as developments progress. For initial volume estimates, the generated trips are assumed to be distributed with $50 \%$ on internal roadways, $30 \%$ to Belfast Keller Road and I-95/US 17, and $20 \%$ to SR 144.

- Area C: East of SR 144

Within the Waterways development, approximately 3,000 residential units are planned.
Development in this area will primarily use Belfast Keller Road and the new l-95 interchange, and SR 144. For initial volume estimates, the generated trips are assumed to be distributed with $30 \%$ on internal roadways, $40 \%$ to Belfast Keller Road and I-95/US 17, and $30 \%$ to SR 144.

## 2030 Development Assumptions

With the new interchange in place, development is anticipated to occur at a relatively rapid pace within Area A. By 2030, it is assumed that roughly $50 \%$ to $60 \%$ of the planned industrial development will have been built. Based on Institute of Transportation Engineers Trip Generation estimates, 10 million square feet of industrial / commercial space could generate up to 50,000 daily trips.

The overall residential growth within Areas $B$ and $C$ is assumed to expand at a rate of roughly 300 to 350 units per year. Approximately $75 \%$ of these residences are assumed to be within areas west of SR 144 (Area B); $25 \%$ are assumed to be located east of SR 144 (Area C). With these assumptions, there would be roughly 3,750 new residences in Area $B$ and 1250 new residences in Area C by 2030. These new residences could be expected to generate roughly 25,000 daily trips in Area B and 10,000 new trips in Area C.

Development assumptions and the associated trips generated from 2016 to 2030 are shown in Figure 3.

## 2040 Development Assumptions

By 2040, it is assumed that $80 \%$ of the planned development in Area A will have been built, consisting of approximately 15 million square feet of industrial/commercial space. If residential development in Areas $B$ and $C$ were to continue at the same pace as described above, there could be a total of 6,400 new residences in Area $B$ and 2,100 new residences in Area $C$.

This level of development could generate up to 75,000 daily trips in Area A, 38,000 daily trips in Area B and 15,000 daily trips in Area C.

Development assumptions and the associated trips generated from 2016 to 2040 are shown in Figure 4.

## 6. Future Corridor Volumes

Based on the development assumptions outlined above, a range of daily volumes is projected along each of the major corridors. Actual volumes will depend heavily on the pace of development, the specific types of land uses, internal capture, traffic distribution, and numerous other factors.

The volume estimates for 2030 and 2040, shown in Figures 5 and 6, are used as a general outline to determine typical sections for each roadway.

## US 17

US 17 through much of Bryan County is currently a four lane divided section. Current volumes are roughly 24,000 vehicles per day near the Belfast Keller Road intersection.

Future volumes will depend heavily on the traffic pattern shifts caused by the new interchange, and the development within Area A.

The new interchange at Belfast Keller Road and I-95 may divert some of the existing traffic off of US 17. Any diversions, however, would likely be off-set by development within Area A. Volumes on US 17 and Belfast Keller Road will balance depending on the efficiency of the roadways and interchanges (delays at Exit 87 vs delays at the new interchange). Widening of Belfast Keller Road to four lanes from US 17 to I-95 could delay the need for widening the portion of US 17 to six lanes. Ultimately, there may be a need to widen US 17 to 6 lanes as Area A becomes fully developed.

Access control along US 17 should be strictly monitored. Developments should provide internal connections in order to minimize driveway accesses. Signals and median breaks should be limited as much as reasonably possible. These steps could help extend the acceptable level of service for the corridor for a few additional years before widening would be needed.

## SR 144

SR 144 is planned to be widened to a four lane divided section from Timber Trail to Belfast River Road. Though delays will grow with the increased volumes, the widened section should be adequate through 2040 assuming other roadway options are provided (an improved Harris Trail Road, improved Belfast Keller Road, and new I-95 interchange). Also access controls mentioned above could assist in allowing an adequate level of service to be maintained as traffic continues to grow.

By 2030, volumes on SR 144 south of Belfast River Road may approach levels where widening should be considered. By 2040, anticipated volumes indicate that an extension of the SR 144 widening would be needed south to Belfast Keller Road.

Timing will depend primarily on the pace of development within the Waterways development and the rest of the Area C development. There is also potential that this widening may not be needed if Belfast Keller Road is widened to four lanes between I-95 and the Waterways development. Future travel patterns will dictate which section of roadway experiences heavier use as development progresses.

As a main arterial roadway through the area, access management should be administered with the through traffic progression in mind. Signals should be $1 / 2$ mile apart if possible; a minimum of $1 / 4$ mile between signals should be maintained. With a 45 mph speed limit, driveways should be at least 250 feet apart. Connectivity and parallel routes should be encouraged as a part of proposed developments.

## Belfast Keller Road

Belfast Keller Road is currently a two lane facility. With the new l-95 interchange in place, development along Belfast Keller Road is anticipated to grow quickly and significantly. By 2030, volumes on Belfast Keller Road could rise to the level where a four lane divided section is needed between US 17 and Belfast River Road. Right-of-ways along these growing areas should be reserved to accommodate the future widening. Typical sections for various roadway types is shown in Figure 10.

As mentioned in the previous section regarding SR 144, depending on travel patterns, widening Belfast Keller Road to four lanes between Belfast River Road and SR 144 may be needed.

It is recommended that when widened, a four lane median divided section, rather than a five lane section, be chosen. With a divided median, access control measures near the interchange can be easily implemented. In general, signals should be $1 / 2$ mile apart If possible; a minimum of $1 / 4$ mile between signals should be maintained.

Particular consideration should be given to access control in the areas in the vicinity of the interchange. The nearest major intersection on Belfast Keller Road should be located at least 1000' away from the interchange ramp intersections (currently planned as roundabouts) as required by GDOT.

## Harris Trail Road

Harris Trail is currently a four lane section from US 17 to Timber Trail. Previous studies have considered extending this four lane section from Timber Trail to Belfast River Road. By 2030, this extension will likely be needed if the residential development in Area B proceeds as anticipated.

As the area surrounding Harris Trail Road transitions from rural to suburban, the importance of maintaining adequate through movement on Harris Trail Road will become more critical. As with SR 144 , signals should be $1 / 2$ mile apart If possible, with a minimum of $1 / 4$ mile between signals. When the roadway is widened, consideration should be given to higher design speeds than are currently provided. Typical sections for various roadway types is shown in Figure 10

As development continues in the coming years, extending Harris Trail Road (via Dunham Marsh Road) through to Belfast Keller Road should be considered. This section of roadway would likely be a two lane facility. The roadway and improvements should be installed as additional development occurs along Dunham Marsh Raod.

## New Connector Roads/ Belfast River Road

New connector roads should also be planned as part of the growing roadway network within proposed developments. As residential areas develop within Area B, additional east-west connections should be considered to supplement Belfast River Road. At least
one of these new east-west connections should be planned as a managed access multi-lane facility. New connectors should be planned as public thoroughfares with the goal of dispersing area traffic and providing for through movements rather than simply subdivision access. Typical sections for various roadway types is shown in Figure 10.

## Construction Costs

The costs for the types of improvements discussed in this study vary widely and are affected by many site specific factors. Some of the items that are a part of the overall project cost would be design costs, right-of-way costs, utility relocation costs, and construction costs. Right-of-way and utlity relocation costs are extremely site specific and as the various projects move foreward estimates for these items could be developed during the concept development stage of the project. The cost for design also can vary greatly depending on the size of the project and funding source. The following costs for construction of various improvements are again site specific but some ranges for budgeting purposes are:

| $\circ$ | Road widening 2-lanes to 4-lanes | $\$ 2$ to $\$ 4$ million/mile |
| :--- | :--- | :--- |
| $\circ$ | Signal Installation w/ Intersection improvements | $\$ 250,000$ to $\$ 500,000$ |
| $\circ$ | Single Lane Roundabout | $\$ 400,000$ to $\$ 800,000$ |
| $\circ$ | Multi-lane Roundabout | $\$ 1$ million to $\$ 1.5$ million |

As projects are identified and moved forward costs for design, right-of-way, and utility relocations would need to be added to the above costs to establish the overall budget for the project.

## 7. Study Intersections

As the area develops, intersection improvements will be needed at numerous locations, regardless of overall corridor widenings. In each case, appropriate studies to determine turn lane additions, signal warrants, or roundabout feasibility will be needed.

The following summary considers the current conditions and the potential for future development. Several intersections discussed in section 2 would benefit from more detailed analysis and likely some immediate improvements. Recommendations for other short term improvements (5-7 years) are shown in Figure 7, mid-term improvements in Figure 8, and long term improvements in Figure 9.

Along the SR 144 corridor, there are several signalized intersections near the 1-95 interchange, at US 17, and at Timber Trail. GDOT is currently evaluating improvements to the I-95 interchange ramp termini. At the intersection of US 17, operations will continue to deteriorate as development progresses. A major upgrade may be needed in the future, the extent of which would need to be studied in detail. Additional improvements may be needed in the future at Port Royal Road, SR 144 SPUR, and Belfast Keller Road. The need for signals at Port Royal and SR 144 SPUR may be delayed with the widening of SR 144. The timing or need for signalization or roundabout installation at Belfast Keller Road will depend primarily on the development of the Waterways tract. The existing roundabout at Belfast River Road may also need to be expanded to a multi-lane configuration as development continues.

Along the US 17 corridor, a relatively immediate need will be a new signal or roundabout at the Belfast Keller Road intersection. This intersection operates with relatively long delays in the current peak hours. These delays will grow as the industrial areas in Area A are developed. GDOT is evaluating the existing interchange ramp termini with US 17, however, any substantial change to the interchange would likely require work on the l-95 bridge structure. As stated above the SR 144 intersection will likely need some type of major upgrade in the future.

Along the Harris Trail Road corridor, new roundabouts or signals will likely be needed at Timber Trail, Port Royal Trail, and the Belfast River Road intersections. Additional intersection improvements may be needed at any new connector roadways installed through Area B. The timing of these will follow development patterns, with the northern most intersections requiring attention first.

Along the Belfast Keller Road corridor, new roundabouts are planned at the l-95 interchange. As stated above a new signal or roundabout should be considered at the US 17 intersections as development continues and the new interchange opens for traffic. Additional roundabouts or signals will be needed as development progresses along the corridor. The interior roadways within Areas A and B should be carefully planned to provide adequate and uniform spacing of major intersections along Belfast Keller Road. Another relatively immediate improvement that should be considered would be to replace the all-way stop at Belfast Keller Road and Belfast River Road with a single lane roundabout. When the new interchange opens and volumes on Belfast Keller Road increase, the current all-way stop configuration will likely function poorly.

## 8. Next Steps

Many times studies like this provide broad direction and ideas on where future improvements are needed in an area. There are some other items, not necessarily related to roadway improvements, that need to be addressed more quickly to help keep this planning study on track moving forward. The other items that need to be addressed as the interchange and 144 widening projects are under construction are:

- Complete a review of local roadways and signals. Once the review is complete formalize a maintenance program to help provide good alternate routes to the main roadway. A maintenance program is not something that everyone gets excited about but if roadways are neglected it will create a much larger expense later to repair or reconstruct a failing street.
- Begin work on an Access Management Plan. As discussed above, access management can be a great tool in maintaining adequate levels of service on main roadways. Along Harris Trail, Belfast Keller, Belfast River, and the proposed new connector road the establishment of full access and right-in/right-out locations would help provide for smart growth along those corridors and preserve their levels of service into the future.
- Develop typical roadway sections for various types of facilities. This would allow for right-of-way to be identified and set aside as development is occurring in these growth areas. Planning in these corridors now will help save money in the future on right-of-way and let there not be any surprises regarding roadway improvements along various corridors. It would be advantageous for these sections to be adopted by the Municipalities as well as the County to encourage uniformity in the right-of-way requirements.
- Begin planning and design for those projects identified in the 5-7 year window to be ready to implement when the need arises. This planning effort could also begin to identify projects that may be considered for a future sales tax or other financing mechanism.
- Explore funding options for future roadway improvements. Now is the time to evaluate the various options that may be available for funding roadway construction. Vetting options now will allow those that are not feasible to be eliminated and those that show real potential to be discussed among the elected officials and public and implemented prior to significant growth along the idendified corridors.
- Prepare/Update the bicycle plan for the area. This will allow alternative modes of transportation to be incorporated into future designs (ie typical sections) for the identified corridors.

Working on the above "Next Step" will help improve the overall transporation system for the traveling public and position the City/County for success moving forward as the growth in the area occurs.

## 9. SUMMARY

Southern Bryan County, and by proximity the City of Richmond Hill, is anticipated to grow significantly in the near future. In an effort to grow smartly and help maintain the quality of life for those that work and live in the City and Southern Bryan County, a study has been commissioned to evaluate the existing roadway network. The study is based on current traffic data and will utilize potential development information to forecast what
and where improvements may be needed as this growth occurs. This report is intended to be used as a planning tool for local officials in the coming years. Figure 1 shows the study area and major roadway networks included in the review.

Existing AM and PM peak hour counts were collected at twelve intersections within the study area. The intersections counted can be seen in Figure 2. Average daily traffic volumes for the major corridors were collected from existing GDOT count stations for the past 5 years. There are several existing intersections that currently have, or will have, excessive delays on one or more legs. These intersections need more detailed analysis to determine the appropriate improvements needed to help mitigate these delays. Table 3 shows the current levels of service at the study intersections.

The pending improvements on SR 144 as well as the construction of the new interchange at I-95 and Belfast Keller Road will likely have a positive impact on some of the heaviest traveled corridors. The new projects will provide additional roadway capacity and divert traffic away from some of the currently congested areas, however, during the construction of these two projects there will likely be increased traffic on local roads. These local roads, such as, Harris Trail and its connectors to SR 144 will need to be evaluated and if required, improved prior to construction beginning to accommodate this likely increase in traffic. These potential improvements could be as simple as improved signage or the need may be more substantial like additional pavement width or paved shoulders. Other major improvements to the various studied corridors or intersections should be delayed until after these projects have been completed so their affect can be measured and the appropriate improvements made.

Access Management is an important aspect of protecting the level of service for a roadway. As development planning occurs the City should implement an access management plan based on the guidelines shown in section 4 of this report. For major corridors it may be advisable to adopt a specific plan for that corridor based on input from nearby or adjacent property owners and the traveling public.

Connectivity between various developments should be encouraged in order to provide options for the traveling public and allow for reduced travel on major corridors. As an efficient transportation network is good for all in the community, the governing municipality should coordinate with property owners and developers to set aside right-of-way that may be required for future roadway improvements, or future new connector roads.

The development patterns for the area will ultimately dictate the improvements that will be required. The development assumptions used in this study are described in section 5. The improvements outlined below assume the SR 144 widening project and the new interchange at l-95/Belfast Keller Road will be completed. Some sample typical roadway sections are shown in Figure 10. Potential improvement needs are categorized into three sections: likely needed within the next 5-7 years, by 2030 and by 2040.

The following improvements may be needed within the next 5-7 years, depending on development patterns:

- Install a signal at US 17 / Belfast Keller Road intersection
- Install a roundabout or signal at the Belfast River Road / Belfast Keller Road intersection
- Install a roundabout or signal at the Harris Trail / Timber Trail intersection

By 2030, depending on development patterns, the following may be needed:

- Widen Harris Trail to a four-lane facility from Timber Trail to Belfast River Road
- Reserve Right of way and/or construct a new two-lane roadway between Belfast Keller Road and SR 144; install a roundabout or signal at intersections with Belfast Keller Road, Harris Trail Road, and SR 144
- Install a roundabout or signal at the Harris Trail / Port Royal Road intersection
- Install a roundabout or signal at the Harris Trail / Belfast River Road intersection
- Install a roundabout or signal at the SR 144 / Port Royal Road intersection
- Install a roundabout or signal at the SR 144 / Spur 144 intersection
- Expand the roundabout at the SR 144/ Belfast Keller Road
- Install a roundabout or signal at the SR 144 / Belfast Keller Road/ Oak Level Road intersection

By 2040, depending on development patterns, the following may be needed:

- Widen US 17 to a six-lane facility through Bryan County
- Widen Belfast Keller Road to a four lane facility from US 17 to SR 144
- Widen SR 144 from Belfast River Road to Belfast Keller Road/ Oak Level Road

Funding for the above projects could come from a combination of sources including but not limited to general funds, SPLOST, LOST, T-SPLOST, special tax districts, cost recovery agreements, State transportation funds (from the new state transportation tax), projects identified as a part of the MPO process, LMIG funds, GDOT Safety funds, Federal funds (this would likely be for project on interstates or significant State Routes) and other funding sources such as impact fees.

This study is intended for use as a planning tool to provide a baseline for the transportation network in the City of Richmond Hill and Southern Bryan County. As development continues and improvements are made, this study will need to be updated. A logical time for updating this study may be when the SR 144 widening and the new I-95 interchange at Belfast Keller Road are completed. With these improvements in place, the actual traffic patterns that result from these additions may be better assessed.

The "Next Steps" idendified in section 8 provide many options to advance this study and the overall transporation network for the area. Moving forward with these work tasks will position the City/County to be ready as the growth in the area occurs.

ADDENDUM: 2040 TOTAL MOBILITY PLAN MODIFICATION FOR EXPANDED METROPOLITAN PLANNING AREA

## Coastal Region Metropolitan Planning Organization (CORE MPO) Metropolitan Transportation Plan Modification for MPO Boundary Expansion

## INTRODUCTION

As a result of the 2010 US Census and the growth in the region, the designated Urbanized Area was expanded to include portions of Bryan and Effingham Counties. With this expanded Urbanized Area, the Metropolitan Planning Area for the CORE MPO also was expanded to encompass the growth areas.

At the time of the adoption of the 2040 Total Mobility Plan, the boundary expansion had not been finalized. The boundary for the Metropolitan Planning Area incorporates the area included in the designated Urbanized Area, as well as additional areas expected to experience growth and become urbanized within the next twenty years.

Through coordination with Bryan and Effingham Counties, as well as the Georgia Department of Transportation and the Federal Highway Administration, the boundary was identified and adopted. The area in Effingham County includes two small areas of growth in southern Effingham County adjacent to Chatham County. In Bryan County, the growth area includes the municipality of Richmond Hill, which is adjacent to western Chatham County. With the designation of the expanded planning area, the Total Mobility Plan, which is the required Metropolitan Transportation Plan (MTP), must be amended to encompass the additional areas. The expanded planning area is shown in Figure 1, found on page 2.

Figure 1. CORE MPO Expanded Boundary

## EXISTING COUNTY TRANSPORTATION PLANS

The Georgia Department of Transportation Office of Planning coordinates with the local governments outside of the MPO areas for transportation planning and the development of countywide transportation plans. Both Bryan County and Effingham County had plans completed within the last several years and these plans include the sub-areas that are now incorporated into the CORE MPO area. These plans, which include the goals and objectives developed through the planning process with input from officials, stakeholders and the public, and projects identified to address defined transportation needs, serve as the foundation for this addendum. The plans were reviewed to identify the goals and objectives, the transportation needs and projects to address those needs, and any other pertinent data or information.

## 2035 Bryan County Transportation Study

Through the planning process, coordination with local officials and staff, and input from the public and stakeholders, the goals and objectives for the transportation study were developed. These goals and objectives included the following:

- Encourage Multi-modal Transportation Corridors
- Increase capacity along major corridors while improving pedestrian access and connectivity
- Expand the Bicycle/Pedestrian Network
- Expand the bicycle and pedestrian network along major corridors and greenways
- Coordinate Land Use and Transportation
- Identify transportation improvements that are consistent with future land use plans
- Identify transportation improvements that avoid and/or mitigate impacts to the natural environment
- Identify transportation improvements that help preserve the rural-suburban character of the County
- Increase Safety and Operations of Transportation Network
- Improve operations to reduce the number of crashes at critical intersections and hot spots
- Reduce the number of unpaved roadways and provide lighting and sidewalks

The transportation projects incorporated in this plan include capacity projects, operational, safety and maintenance projects, and bicycle and pedestrian projects. The projects from this plan that were located partially or completely within Richmond Hill were identified. These projects include:

## Capacity Projects

| PI \# | Project | Project Description | $\mathbf{2 0 0 8}$ <br> Estimated Cost |
| :--- | :--- | :--- | :---: |
| 511035 | I-95 | Widen from 6 to 8 lanes from I-16 (Chatham Co) to SR 144 | $\$ 9,116,000^{*}$ |
| N/A | US 17 | Widen from 4 to 6 lanes from SR 196 (Liberty Co) to I-95 | $\$ 49,827,000$ |
| N/A | Harris <br> Trail | Widen from 2 to 4 lanes from Timber Trail to Port Royal Road | $\$ 10,980,000$ |
| 532370 | SR 144 | Widen from 2 to 4 lanes from S of CR 100 to S of CR 154 | $\$ \$ 9,762,464^{* *}$ |

[^2]Operations/Systems Management/ Safety Projects

| PI \# | Project | 2008 <br> Estimated Cost |  |
| :--- | :--- | :--- | ---: |
| 0012830 | I-95@ US 17 | Interchange operational improvements | $\$ 3,323,000$ |
| 0010740 | US 17 @ SR 144 | Intersection operational/safety <br> improvements | $\$ 1,588,000$ |
| N/A | US 17 @ Harris Trail Rd. | Intersection operational/safety <br> improvements | $\$ 829,000$ |
| N/A | US 17 @ Mulberry St. | Intersection operational/safety <br> improvements | $\$ 125,000$ |
| N/A | SR 144 @ Timber Trail Rd | Intersection operational/safety <br> improvements | $\$ 738,000$ |
| N/A | SR 144 @ Ivey St. | Intersection operational/safety <br> improvements | $\$ 738,000$ |
| N/A | SR 144: I-95 to Timber <br> Trail Rd | Access management | $\$ 2,781,000$ |

Pedestrian Projects

| PI \# | Project | Project Description | 2008 <br> Estimated Cost |
| :---: | :---: | :---: | :---: |
| N/A | Wildcat Drive | SW: Harris Trail Rd to Richmond Hill High School | \$ 84,500 |
| N/A | Richmond Hill Middle Sch | SW: Harris Trail Rd to Richmond Hill Middle Sch. | \$ 13,000 |
| N/A | Frances Meeks Way | SW: Ford Avenue to Maple Street | \$ 18,835 |
| N/A | Ivey Street | SW: Ford Avenue to Laurel Hill Circle | \$ 260,000 |
| N/A | Maple Street | SW: Constitution Way to Pre-K Center Walkway | \$ 58,500 |
| N/A | Constitution Way | SW: Cherry Street to Ford Avenue | \$ 227,500 |
| N/A | Cherry Street | SW: Ford Avenue to Constitution Way | \$ 84,500 |
| N/A | Richmond Hill High Sch | Shared Use Path: County Recreation Center to Richmond Hill High School | \$ 38,000 |
| N/A | Ford Avenue | SW: Railroad Tracks to I-95 | \$ 1,105,000 |
| N/A | Ford Avenue | SW: Ford Avenue to Timber Trail | \$ 78,000 |
| N/A | Timber Trail Road | SW: Ford Avenue to Development | \$ 104,000 |

The identified projects were evaluated and prioritized using a multiple step process utilizing the guidelines from the Project Prioritization Process established by the Georgia Department of Transportation. The prioritization criteria included the following categories and weights:

- Safety (30\%)
- Reduction in crashes
- Congestion (30\%)
- Reduction in delay
- Connectivity, Access and Mobility (40\%)
- Travel time savings on key corridors (20\%)
- Consistency with local plans (20\%)

## Multimodal Transportation Study for Effingham County

Through the planning process, coordination with local officials and staff, and input from the public and stakeholders, the goals and objectives for the transportation study were developed. These goals and objectives, focused on both transportation and land use, included the following:

- Transportation Planning
- Develop a long-range transportation plan for the county
- Promote comprehensive, long-range transportation planning in conjunction with comprehensive planning
- Promote alternative modes of transportation, such as walking, bicycling and public transit
- Accessibility and mobility
- Encourage mixed-use development and design standards that are pedestrian oriented to promote mobility and access for all citizens
- Ensure that new and reconstructed roadways will support multiple modes of transportation and enhance the aesthetics of the community
- Support access management strategies to improve the safety and aesthetics of commercial corridors
- Network connectivity
- Ensure connectivity between road network, public transit, and pedestrian/bike paths
- Promote higher-density and mixed-use developments in areas conducive to walking and bicycling
- Promote a continuous network of bicycle routes and provide bicycle facilities (e.g., parking racks) at destinations throughout the county
- Promote pedestrian and bicycle mobility and circulation in and between residential subdivisions and surrounding commercial uses
- Public transportation
- Promote county participation in a regional bus system, such as commuter routes to Chatham County and rural routes between populated areas of the county
- Identify potential linkages with social service agencies and proposed rural transit to provide transportation for those with special needs
- Protect opportunities for the future re-use of railroad infrastructure for public transit
- Aesthetics and scenic corridors
- Reduce the visual impact of the automobile in both commercial and residential areas of the county/city
- Protect scenic corridors including preservation of existing trees within the right-of-way; Create a "sense of place" along the county's gateways and entrance corridors
- Adopt and enforce a signage ordinance to minimize the negative aesthetic impacts of inappropriate signage on the landscape
- Evaluate the entryways into the community and develop landscaping, signage, etc., at all points of entry in conjunction with private landowners and the Georgia Department of Transportation
- Develop a vision for the aesthetic quality of future arterial highways, gateway interchanges, and collector streets

## Land Use and Related Goals

- General Policies
- Address compatible land uses in all districts, especially industrial and commercial uses adjacent to residential
- Coordinate future land use with transportation
- Allow greater residential densities in areas where water/sewer infrastructure already exists
- Protect residential areas from intrusion of incompatible and conflicting non-residential land uses
- Promote efficient use of land by creating well designed, pedestrian-friendly development patterns that contain a mix of uses [where people have easy access to schools, parks, residences and businesses through walkways, bike paths and other pedestrian-friendly infrastructure
- Target reinvestment in declining, existing neighborhoods to further encourage private sector redevelopment and accommodate future growth
- Encourage efficient land use
- Promote the development of mixed-uses and the redevelopment/revitalization of existing and underutilized commercial and industrial areas over development of new land for commercial purposes
- Encourage innovative land use planning techniques to be used in building higher density and mixed-use developments, as well as infill developments
- Accommodate new development while enhancing existing local assets
- Promote mixed-use development by right in appropriate areas
- Existing infrastructure and services
- Encourage development in areas where infrastructure and services already exist to maximize efficiency of services and reduce costs associated with sprawling development patterns
- Promote increases in residential densities in areas that meet community design standards, environmental constraints and available infrastructure and service capacities

There were no projects identified in the plan that were located in the CORE MPO planning area.

## Consistency of Goals and Objectives

The goals and objectives established for the plans form the framework of the overall planning process. With the review of the two county plans and the goals and objectives established for those plans identified, they were compared to the established goals and objectives of the 2040 Total Mobility Plan, which is the adopted Metropolitan Transportation Plan for the CORE MPO. Those goals and the federal planning factors are listed below. The comparison found the goals from the county plans to be consistent with the goals in the Total Mobility Plan, as well as the required federal planning factors. The comparison of the goals from the three plans and the federal requirements are shown in Figure 2.

Total Mobility Plan Goals
Support Economic Vitality
Ensure and Increase Safety
Ensure and Increase Security
Accessibility, Mobility and Connectivity

MAP -21 Planning Factors
Support Economic Vitality
Increase Safety
Increase Security
Increase Accessibility \& Mobility

Protect and Enhance the Environment and Quality of Life System Management and Maintenance Intergovernmental Coordination

Environmental and Quality of Life
Enhance System Integration and Connectivity
Promote System Management and System Preservation

Figure 2. Comparison of Planning Goals

|  | Total Mobility Plan Goals Relationship | Federal Planning Factors Relationship |
| :---: | :---: | :---: |
| Bryan County Transportation Plan Goals |  |  |
| Encourage multimodal transportation corridors | Accessibility, mobility and connectivity | Increase accessibility |
|  |  | Enhance system integration and connectivity |
| Expand bicycle and pedestrian networks | Accessibility, mobility and connectivity | Increase accessibility |
|  | Environment and quality of life | Environment and quality of life |
|  |  | Enhance system integration and connectivity |
| Coordinate land use and transportation | Intergovernmental coordination | Enhance system integration and connectivity |

| Increase safety and operations | Increase safety | Increase safety |
|  | System management and maintenance | Promote system management and operations |
| Effingham County Multimodal Transportation Study Goals |  |  |
| Transportation planning | Relates to all goals | Relates to all factors |
| Accessibility and mobility | Accessibility, mobility and connectivity | Increase accessibility |
|  |  | Enhance system integration and connectivity |
| Network connectivity | Accessibility, mobility and connectivity | Enhance system integration and connectivity |
| Public transportation | Accessibility, mobility and connectivity | Increase accessibility |
|  |  | Enhance system integration and connectivity |
| Aesthetics and scenic corridors | Environment and quality of life | Environment and quality of life |

## FINANCIAL ANALYSIS

The MTP is required to include a financially feasible project list, which requires that the project costs are balanced with the anticipated revenues for the planning period. The list of financially balanced projects comprises the Cost Feasible Plan; those projects which are not included in the Cost Feasible Plan are incorporated into the Vision Plan, or the unfunded project list.

## Revenues

The first step in the development of the financially balanced project list is the identification of the anticipated federal revenues over the planning period. The development of these revenues is accomplished in coordination with the Georgia Department of Transportation (GDOT). GDOT reviewed the funding of projects within the expanded area and developed the historical financial data from the last ten years. There were no projects funded in the Effingham County portion of the expanded area from 2006 to 2014. In the Richmond Hill area, the revenues over the ten year period were a combined $\$ 11,511,346$ which occurred with the funding of one project in 2013 and 2014.

The next step in the development of available revenues is the projection of the anticipated funding over the planning period through the horizon year of 2040. In order to be consistent with the methodology utilized in the Total Mobility Plan, anticipated revenues were escalated with an annual inflation rate of 2.5\%.

With the recognition that the escalation of the total amount of historical funding that occurred during the two years would artificially inflate the anticipated revenues, the amount was averaged over the tenyear period, with an annual funding amount of $\$ 1,151,134$. This annual amount was escalated using the 2.5\% inflation factor through 2040. The total anticipated revenues for the planning horizon from 2016 to 2040 were calculated to be $\$ 41,454,323$.

## Project Costs

The next step in the process was the development of the project costs. All projects within the planning area that were already underway and had funding programmed were identified. The one project that was identified was the widening of SR 144, with Preliminary Engineering and Right of Way acquisition already underway and Construction planned for 2017. The total funding for the construction of this project is $\$ 20,634,299$; however, the project does extend outside of the expanded MPO planning area and into the unincorporated area of Bryan County. Based on the mileage of the project within the Richmond Hill municipal boundary and the MPO boundary, the cost for the project is $\$ 9,762,464$.

The projects and estimated costs that were identified in the previous 2035 Bryan County Transportation Plan were also identified and those costs were also escalated with an annual inflation factor of $2.5 \%$. The MTP is structured with three cost bands, which include:

- Cost Band 1: 2015 - 2020
- Cost Band 2: 2021-2030
- Cost Band 3: 2031-2040

The inflated cost estimates for projects used in the development of the Cost Feasible Plan use the midpoint cost of the band in which the project is included. For example, a project included in Cost Band 2 utilizes the inflated cost for 2025.

## Financial Summary

Once the project cost estimates have been developed and any projects already programmed for construction identified, the revenues that will be available for additional projects is calculated. This information is shown below:

| Revenue Projects and Available Funding |  |
| :--- | ---: |
| Available Revenues | $\$ 41,454,323$ |
| Programmed Projects | $\$ 9,762,464$ |
| Funding Available for Additional Projects | $\$ 31,691,859$ |

## PROJECT IDENTIFICATION AND PRIORITIZATION

From the review of the 2035 Bryan County Plan, several projects were identified as needs. These projects, located in the planning area, included:

- SR 144 Widening (Currently Underway)
- Harris Trail Widening from Timber Trail to Port Royal Road
- I-95 Widening from I-16 to SR 144 (2 miles in Bryan County)
- I-95/SR 144 Interchange Improvements
- US 17 @ SR 144 Intersection Operation/Safety Improvements
- I-95 @ US 17 Interchange Improvements

GDOT has undertaken several of the projects from the list above through the lump sum program. These projects include the I-95/SR 144 and I-95/US 17 interchange improvements, and the completion of the US 17/SR 144 intersection improvements.

Richmond Hill identified several other projects as needs for their City, as well as modified projects from the previous plan based on changing conditions. Through coordination with the Richmond Hill staff, these projects were included in the needs list. The projects located inside the planning area include:

- Port Royal Road Widening from SR 144 to Harris Trail Road
- I-95 Frontage Road from SR 144 to US 17
- I-95/SR 144 Interchange Reconstruction

Cost estimates for each of these projects were developed and inflated annually through the planning horizon year of 2040 based on the described methodology. These cost estimates were developed based on information from the previous plan, GDOT, and from the Richmond Hill planning and engineering staff. Project costs are also stratified by project implementation phase of Preliminary Engineering, Right of Way, and Construction.

The next step in the plan development process was to identify the local priorities for inclusion in the Cost Feasible Plan and to balance the project costs against the available revenues. In coordination with the Richmond Hill staff, these priorities were identified based on addressing the existing transportation needs and the provision of needed transportation improvements for existing and/or anticipated growth areas.

The widening of SR 144 from CR 100 to CR 154 is already programmed for Construction in 2017 and is incorporated in the first cost band of 2015 to 2020. The other projects identified as the highest priorities included:

- Harris Trail Widening from Timber Trail to Port Royal Road
- Port Royal Road Widening from SR 144 to Harris Trail
- I-95/SR 144 Interchange Improvements

The above project priorities and the implementation phases were incorporated into the Cost Feasible Plan, with the remaining project needs included in the Vision Plan. In addition, the pedestrian and bicycle projects identified in the 2035 Bryan County Plan and by Richmond Hill staff were also incorporated into the Vision Plan.

## COORDINATION AND PUBLIC PARTICIPATION

Coordination with local staff and elected officials and public involvement was a critical element in the planning process. These coordination and input efforts were accomplished on multiple levels to ensure all interested parties had the opportunity to voice their opinions and provide input.

The first step was to provide a project overview presentation to the Effingham County Commission and to the Richmond Hill City Council. This presentation was developed to provide background information regarding the MPO expansion, the MPO planning process, and the steps and schedule involved in the development of the plan modification. In addition to the presentation, a project information sheet was also developed and distributed.

In conjunction with these presentations, an open house for the public was also held. This open house provided meeting attendees with the opportunity to ask questions and provide feedback and information to the project team. A public survey regarding transportation was also developed and distributed at the open house along with the project information sheet. In addition to the hard copy survey, the survey was also posted the CORE MPO website for completion on-line by interested parties. The open houses were advertised in conjunction with the regularly scheduled County and City Council meetings and were held in locations accessible to all citizens.

The Effingham County presentation and open house was held on August 18, 2015 at the Effingham County Administrative Complex in Springfield and the Richmond Hill presentation and open house was held on September 1, 2015. A second round of presentations and open house formats was held at the Richmond Hill City Council meeting on January 19, 2016 during the 30-day public comment period for the draft Addendum, which ran from January 11 through February 9.

The survey respondents primarily utilized the on-line opportunity, with one hard copy response. There were a total of 23 responses, with 12 of the respondents identifying Bryan County as their place of residence; 2 respondents identifying Effingham County as their place of residence; 8 respondents identifying Chatham County as their place of residence, and 1 respondent did not answer the question. These survey responses provided input as to priorities, needs, and concerns regarding the transportation system. The following elements were the areas of concern identified by the respondents as very important or important.

Survey Elements Ranked Very Important or Important

| Safety and Security | $95.7 \%$ |
| :--- | :---: |
| Maintenance of Roads | $95.5 \%$ |
| Addressing Traffic Congestion | $78.3 \%$ |
| Presence of Pedestrian and Bicycle Facilities | $78.3 \%$ |
| Movement of Freight | $78.3 \%$ |
| Addressing Lack of Travel Options | $78.3 \%$ |

With the small geographic area of the expanded boundary extending into Effingham County, there were no projects identified within the boundary in the previous county plan or through coordination with the County staff. However, extensive coordination with the City of Richmond Hill staff was important in the development of the project list. The project team met with the City staff to review the projects identified in the 2035 Bryan County Plan, identify those projects located within the planning area, as well as any additional projects, and to prioritize the identified projects. Ongoing coordination was undertaken through the financial balancing process, resulting in the final prioritized project list.

In addition to the ongoing coordination with the Richmond Hill staff, the project team also coordinated with the GDOT Office of Planning on an ongoing basis. This ongoing coordination ensured the resulting project list was consistent with the state and federal process and requirements. In addition, all agency comments that were received were addressed.

The project team also provided updates to the MPO committees regarding the project status through presentations at their August, October, and December meetings. The final draft of the update was presented to the MPO committees at their February and March meetings and formal public hearings were held to obtain comments from interested members of the public, however, no comments were received.

The MPO Board adopted the addendum at the meeting held on March 9, 2016.

## APPENDIX

- Public Meeting \# 1
- Project Information Sheet
- Survey
- Presentation: Effingham County Commission, August 18, 2016
- Presentation: Richmond Hill City Council, September 1, 2016
- Project Information for Effingham and Bryan Counties
- Public Meeting \# 2: Richmond Hill City Council, January 19, 2016
- Presentation: Richmond Hill
- Sign-in Sheet
- Workshop Summary

[^0]:    *     - Custom rate used for selected time period.

[^1]:    *     - Custom rate used for selected time period.

[^2]:    * Cost shown for 2 miles of project in Bryan County $\quad$ **Cost shown for portion in MPA area

[^3]:    Proiects and ppoject numbers identified in 2035 Bran County Transoortaion Plan
